01 PHOTOACTOMETER:

**Specification:**

- It consists of an activity Cage or well 30 x 30 x 30 cm in dimension with a wire mesh floor. Six pairs of Light transmitters and receivers are placed around the outer periphery of the activity cage so that it forms a mesh of beam in shape of square checks at a suitable height from the floor of the activity cage. The locomotive activity of the animal is recorded when it interrupts any one or more light beams. The interrupted light signals are further converted into electrical ones through a compact solid state circuitry and the activity is recorded on a bright high speed Digital counter for display.
